

APPENDIX A—MINERAL LEASING STIPULATIONS

A.1 STIPULATIONS APPLICABLE TO MINERAL LEASING

Table A-1 lists, by alternative, the stipulations for mineral leasing referred to throughout this document. The stipulations developed would apply to both oil and gas leasing and potash leasing. The stipulations also apply to geophysical exploration.

A.1.1 Description of Stipulations

The following tables show resources of concern and stipulations including exceptions, modifications, and waivers by alternative. Lands within the Planning Area have been designated as either 1) open to mineral leasing subject to the standard lease terms and applicable laws, regulations, and orders, 2) open to mineral leasing subject to major constraints (no surface occupancy [NSO] stipulation), 3) open to mineral leasing subject to minor constraints/special stipulations (timing limitation [TL] and/or controlled surface use [CSU] stipulation), and 4) closed to mineral leasing.

- Areas identified with a CSU stipulation are open to mineral leasing, but identified resource values require special operation constraints.
- Areas identified with a TL stipulation are open to mineral leasing, but surface use during specified time periods is prohibited to protect identified resource values.
- Areas identified with a NSO stipulation are open to mineral leasing, but use or occupancy of the surface for exploration and mineral development is prohibited in order to protect identified resource values. The minerals under NSO lands may potentially be developed by directionally or horizontally drilling from nearby lands that do not have the NSO limitation.
- Areas open to mineral leasing are subject to existing laws, regulations, and formal orders; and the terms and conditions of the standard lease form.
- Standard terms and conditions for oil and gas leasing allow the BLM to impose reasonable measures, such as modifying well siting or timing of operations to minimize resource impacts.
- Areas identified as closed are not open to mineral leasing. Although “closed” is not a leasing stipulation, closed areas are shown in Appendix A for the purpose of clarity and comparison. The purpose for the closure is also provided in Table A-1.

A.1.2 Exceptions, Modifications, and Waivers

Stipulations may be excepted, modified, or waived by the Authorized Officer. An exception is a one-time exemption for a particular site within a leasehold; exceptions are determined on a case-by-case basis; the stipulation continues to apply to all other sites within the leasehold. A modification is a change to the provisions of a lease stipulation, either temporarily or for the term of the lease. A waiver is a permanent exemption from a lease stipulation. The stipulation no longer applies within the leasehold. The environmental analysis document prepared for site-specific mineral proposals (i.e., APDs, sundry notices) also would need to address proposals to exempt, modify, or waive a surface stipulation.

General exception, modification, and waiver criteria have been developed that apply commonly to many lease stipulations. Table A-1 specifies where the general exceptions, modifications, and waivers apply. The general exceptions, modifications, and waivers are specified as follows:

Exception - The Authorized Officer may grant an exception to a stipulation if it is determined that the factors leading to its inclusion in the lease have changed sufficiently such that: 1) the protection provided by the stipulation is no longer justified or necessary to meet resource objectives established in the Moab MLP; or 2) proposed operations would not cause unacceptable impacts. The Authorized Officer may require additional plans of development, surveys, mitigation proposals, or environmental analysis, and may be required to consult with other government agencies and/or the public in order to make this determination.

Modification - The Authorized Officer may modify a stipulation as a result of new information if: 1) the protection provided by the stipulation is no longer justified or necessary to meet resource objectives established in the Moab MLP; 2) the protection provided by the stipulation is no longer sufficient to meet resource objectives established in the Moab MLP; or 3) proposed operations would not cause unacceptable impacts. The Authorized Officer may require additional plans of development, surveys, mitigation proposals, or environmental analysis, and may be required to consult with other government agencies and/or the public in order to make this determination. The modification may be subject to public review for at least a 30-day period.

Waiver - The Authorized Officer may waive a stipulation if it is determined that the factors leading to its inclusion in the lease no longer exist. The Authorized Officer may require additional plans of development, surveys, mitigation proposals, or environmental analysis, and may be required to consult with other government agencies and/or the public in order to make this determination. The waiver may be subject to public review for at least a 30-day period.

Specific exceptions, modifications, and waivers have also been developed for some of the lease stipulations by alternative and are also provided in Table A-1.

A.2 MINERAL LEASE NOTICES

Table A-2 lists the mineral lease notices that would be applied within the Planning Area. A lease notice provides more detailed information concerning limitations that already exist in law, lease terms, regulations, or operational orders. A lease notice also addresses special items the lessee should consider when planning operations, but does not impose lease stipulations.

Table A-1. Mineral Leasing Stipulations Including Exceptions, Modifications, and Waivers

Resource of Concern	Applicable Area	Stip. Code	Alternative				Stipulation Description
			A	B	C	D	
Air Quality and Greenhouse Gases	Planning Area	CSU	X	X	X	X	<p>All new and replacement internal combustion gas field engines of less than or equal to 300 design-rated horsepower shall not emit more than 2 grams of NOx per horsepower-hour. This requirement does not apply to gas field engines of less than or equal to 40 design-rated horsepower.</p> <p>All new and replacement internal combustion gas field engines of greater than 300 design-rated horsepower must not emit more than 1 gram of NOx per horsepower-hour.</p> <p>Purpose: To protect air quality and minimize greenhouse gas emissions.</p> <p>Exception: None</p> <p>Modification: The Authorized Officer may modify the stated requirements in accordance with updated specifications to comply with the Clean Air Act.</p> <p>Waiver: None</p>
Air Quality	Planning Area	CSU		X	X	X	<p>All drilling and production operations are required to adhere to the following minimum standards:</p> <ol style="list-style-type: none"> 1. Drill rig engines must meet Tier II or better standards, as necessary based on air quality conditions or projections, and consistent with the most stringent EPA emissions standards that are in force at the time of installation or approval. 2. Stationary internal combustion engine standard of 2g NOx/bhp-hr for engines <300HP and 1g NOx/bhp-hr for engines >300 HP. 3. Low bleed or no bleed pneumatic controller. 4. Dehydrator VOC emission controls to +95 percent efficiency. 5. Tank VOC emission controls to +95 percent efficiency equivalent to NSPS subpart 0000. <p>Purpose: To mitigate any potential impact mineral development emissions may have on regional ozone formation.</p> <p>Exception: General exception applies.</p> <p>Modification: General modification applies.</p> <p>Waiver: General waiver applies.</p>
Air Quality	Planning Area	CSU		X	X	X	<p>A Fugitive Dust Control Plan would be required for mineral activities that would disturb a surface area larger than 0.25 acres.</p> <p>Purpose: To minimize the generation of fugitive dust.</p> <p>Exception: General exception applies.</p>

Resource of Concern	Applicable Area	Stip. Code	Alternative				Stipulation Description
			A	B	C	D	
							Modification: General modification applies. Waiver: General waiver applies.
Cultural Resources	Specific Cultural Sites (22,328 acres)	NSO		X		X	No surface occupancy is allowed for a 0.5 mile radius around the following cultural sites and cultural concentration areas listed below: <ul style="list-style-type: none"> • Upper Indian Creek • Kane Creek Rock Art • Lower Kane Creek Rock Art • Levi Well Rock Art • Highway 279 • Seven Mile Canyon • Bartlett Rock Art • Trout Water Rock Art • Mill Canyon • Jug Rock • Dubinky Well • Upper Hell Roaring Canyon • Muleshoe Canyon Purpose: To protect the setting of heavily visited cultural sites and to prevent the introduction of visual, audible, or atmospheric conditions that are out of character with the site or its setting. Exception: The Authorized Officer may grant an exception if the project is not visible or audible from the cultural site or cultural concentration area. Modification: General modification applies. Waiver: General waiver applies.
Cultural Resources	Specific Cultural Sites (45,289 acres)	NSO			X		No surface occupancy is allowed within a 1 mile radius around the following cultural sites and cultural concentration areas listed below: <ul style="list-style-type: none"> • Upper Indian Creek • Kane Creek Rock Art • Lower Kane Creek Rock Art • Levi Well Rock Art • Highway 279 • Seven Mile Canyon • Bartlett Rock Art • Trout Water Rock Art • Mill Canyon • Jug Rock • Dubinky Well • Upper Hell Roaring Canyon

This stipulation does not apply to the maintenance and operation of existing and ongoing facilities. Purpose: To minimize stress and disturbance to deer and elk during critical winter months. Exception: The Authorized Officer may grant an exception if the operator submits a plan that demonstrates impacts from the proposed action can be adequately mitigated or it is determined the habitat is not being utilized during the winter period for any given year. Modification: The Authorized Officer may modify the stipulation if (1) a portion of the area is not being used as winter range by deer/elk or (2) habitat is being utilized outside of stipulation boundaries as winter range and needs to be protected or (3) the migration patterns have changed causing a difference in the season of use. Waiver: The Authorized Officer may waive the stipulation if the crucial winter habitat is unsuitable or unoccupied during winter months by deer/elk and there is no reasonable likelihood of future winter range use.
Wildlife	Deer and Elk Crucial Winter Habitat (125,995 acres)	TL		X		X	No surface-disturbing activities would be allowed within deer and elk crucial winter habitat from November 15 to April 15. This stipulation does not apply to the maintenance and operation of existing and ongoing facilities. Purpose: To minimize stress and disturbance to deer and elk during critical winter months.

Wildlife	Deer and Elk Crucial Winter Habitat (125,995 acres)	CSU		X		X	Apply the Baseline CSU stipulation (see Minerals section, Alternatives B and D) throughout deer and elk crucial winter habitat.
Wildlife	Deer and Elk Crucial and Substantial Winter Habitat (134,625 acres)	CSU			X		Apply the Baseline CSU stipulation (see Minerals section, Alternative C) throughout deer and elk crucial and substantial winter habitat.

Table A-2. Mineral Lease Notices

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
Air Quality Regional Ozone Formation Controls	Planning Area	X				<p>The lessee/operator is given notice that in order to mitigate any potential impact mineral development emissions may have on regional ozone formation, the following Best Management Practices (BMPs) would be required for any development projects:</p> <ul style="list-style-type: none"> • Tier II or better drilling rig engines. • Stationary internal combustion engine standard of 2g NOx/bhp-hr for engines less than 300 horsepower (HP) and 1g NOx/bhp-hr for engines greater than 300 HP. • Low bleed or no bleed pneumatic controller. • Dehydrator volatile organic compound (VOC) emission controls to +95 percent efficiency. • Tank VOC emission controls to +95 percent efficiency.
Air Quality Air Quality Analysis	Planning Area	X	X	X	X	<p>The lessee/operator is given notice that prior to project-specific approval, additional air quality analyses may be required to comply with the National Environmental Policy Act, Federal Land Policy and Management Act, and/or other applicable laws and regulations. Analyses may include dispersion modeling for deposition and visibility impacts analysis,</p>

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
						control equipment determinations, and/or emission inventory development. These analyses may result in the imposition of additional project-specific air quality control measures.
Cultural Resources	Planning Area		X	X	X	The lessee/operator is given notice that measures to mitigate the potential impacts to TCPs or cultural plants identified through consultation may be required. Mitigation would be developed through further consultation with affected groups, which may include measures to maintain the viewshed and intrinsic values, as well as the auditory, visual, and aesthetic settings of the resources.
Cultural Resources	Planning Area		X	X	X	The lessee/operator is given notice that a viewshed assessment would be required for those cultural sites that receive a high degree of visitor use or properties of traditional religious and cultural importance to a Native American tribe. If the assessment shows that the project would have adverse effects to the historic properties, the project may require relocation. The Historic Properties Visual Assessment for Effect Determination Worksheet would be utilized for the viewshed assessment.
Cultural Resources	High Potential for Cultural Sites (135,759 acres)		X	X	X	The lessee/operator is given notice that in areas of high potential for cultural site occurrence there is a higher likelihood of encountering cultural resource concerns (i.e., potential adverse effects) that may require archaeological monitoring, ethnographic data collection, data recovery, and mitigation of historic properties in order to exercise lease rights.
Colorado River Endangered Fish	Colorado River, Green River, and all associated back waters (19,198 acres)	X	X	X	X	<p>The lessee/operator is given notice in order to minimize effects to critical habitats of endangered fish in the Colorado and Green Rivers, surface-disturbing activities within the 100-year floodplain of the Colorado River, Green River, and all associated back waters would not be allowed. Other avoidance and minimization measures include:</p> <ul style="list-style-type: none"> • Surveys would be required prior to operations unless species occupancy and distribution information is complete and available. All surveys must be conducted by qualified individuals. Lease activities would require monitoring throughout the duration of the project. • To ensure desired results are being achieved, minimization measures would be evaluated and, if necessary, Section 7 consultation reinitiated. • Water production would be managed to ensure maintenance or enhancement of riparian habitat. • Avoid loss or disturbance of riparian habitats. • Conduct watershed analysis for leases in designated critical habitat and overlapping major tributaries in order to determine toxicity risk from permanent facilities. • Implement the Utah Oil and Gas Pipeline Crossing Guidance. In areas adjacent to 100-year floodplains, particularly in systems prone to flash floods, analyze the risk for flash floods to impact facilities, and use closed loop drilling, and pipeline burial or suspension according to the Utah Oil and Gas Pipeline Crossing

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
						<p>Guidance to minimize the potential for equipment damage and resulting leaks or spills.</p> <ul style="list-style-type: none"> Water depletions from any portions of the Upper Colorado River drainage basin are considered to adversely affect and adversely modify the critical habitat of the endangered fish species (Bonytail, Colorado pikeminnow, Humpback chub, and Razorback sucker). Section 7 consultation would be completed with the U.S. Fish and Wildlife Service (USFWS) prior to any such water depletions. Additional measures to avoid or minimize effects to the species may be developed and implemented in consultation with the USFWS between the lease sale stage and lease development stage to ensure continued compliance with the ESA.
Mexican Spotted Owl (MSO)	MSO Habitat (175,304 acres)	X	X	X	X	<p>The lessee/operator is given notice that the lands in this parcel contain suitable or designated Critical Habitat for MSO. In order to protect MSO habitat and avoid negative impacts to the species, actions would be avoided or restricted that may cause stress and disturbance during nesting and rearing of their young. Appropriate measures would depend on whether the action is temporary or permanent and whether it occurs within or outside the owl nesting season. A temporary action is completed prior to the following breeding season leaving no permanent structures and resulting in no permanent habitat loss. A permanent action continues for more than one breeding season and/or causes a loss of owl habitat or displaces owls through disturbances (i.e., creation of a permanent structure). Current avoidance and minimization measures include the following:</p> <ul style="list-style-type: none"> Surveys would be required prior to implementation of the proposed action. All surveys must be conducted by qualified individual(s) acceptable to the BLM. Assess habitat suitability for both nesting and foraging using accepted habitat models in conjunction with field reviews. Apply the conservation measures below if project activities occur within 0.5 mile of suitable owl habitat. Determine potential effects of actions to owls and their habitat. Document type of activity, acreage and location of direct habitat impacts, type and extent of indirect impacts relative to location of suitable owl habitat. Document if action is temporary or permanent. Activities may require monitoring throughout the duration of the project. To ensure desired results are being achieved, minimization measures would be evaluated, and, if necessary, Section 7 consultation reinitiated. Any activity that includes water production should be managed to ensure maintenance or enhancement of riparian habitat. Where technically and economically feasible, use directional drilling or multiple wells from the same pad to reduce surface disturbance and eliminate drilling in canyon habitat suitable for MSO nesting. <p>For all temporary actions that may impact owls or suitable habitat:</p>

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
						<ol style="list-style-type: none"> 1. If the action occurs entirely outside of the owl breeding season from March 1 through August 31, and leaves no permanent structure or permanent habitat disturbance, the action can proceed without an occupancy survey. 2. If the action would occur during a breeding season, a survey for owls is required prior to commencing the activity. If owls are found, the activity should be delayed until outside of the breeding season. 3. Rehabilitate access routes created by the project through, such means as raking out scars, re-vegetation, gating access points, etc. <p>For all permanent actions that may impact owls or suitable habitat:</p> <ol style="list-style-type: none"> 1. Survey two consecutive years for owls, according to accepted protocol prior to commencing activities. 2. If owls are found, no disturbing actions would occur within 0.5 miles of an identified site. If nest site is unknown, no activity would occur within the designated current and historic Protected Activity Center (PAC). 3. Avoid permanent structures within 0.5 mile of suitable habitat unless surveyed and not occupied. 4. Reduce noise emissions (e.g., use hospital-grade mufflers) to 45 dBA at 0.5 mile from suitable habitat, including canyon rims. Placement of permanent noise-generating facilities should be contingent upon a noise analysis to ensure noise does not encroach upon a 0.5 mile buffer for suitable habitat, including canyon rims. 5. Limit disturbances to and within suitable habitat by staying on designated and/or approved routes. 6. Limit new access routes created by the project. 7. Modifications to the Surface Use Plan of Operations may be required in order to protect the MSO and/or habitat in accordance with Section 6 of the lease terms, the ESA, and the regulations at 43 Code of Federal Regulations (CFR) 3101.1-2.
Southwestern Willow Flycatcher	Southwestern Willow Flycatcher Habitat (riparian areas) (12,155 acres)	X	X	X	X	<p>The lessee/operator is given notice that the lands in this parcel contains riparian habitat within the range for southwestern willow flycatcher. In order to protect southwestern willow flycatcher habitat and avoid negative impacts to the species, actions would be avoided or restricted that may cause stress and disturbance during nesting and rearing of their young. Appropriate measures would depend on whether the action is temporary or permanent, and whether it occurs within or outside the nesting season. A temporary action is completed prior to the following breeding season leaving no permanent structures and resulting in no permanent habitat loss. A permanent action continues for more than one breeding season and/or causes a loss of habitat or displaces flycatchers through disturbances, i.e., creation of a permanent structure. Current avoidance and minimization measures include the following:</p>

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
						<ol style="list-style-type: none"> 1. Surveys would be required prior to operations unless species occupancy and distribution information is complete and available. All surveys must be conducted by qualified individual(s) and be conducted according to protocol. 2. Activities would require monitoring throughout the duration of the project. To ensure desired results are being achieved, minimization measures would be evaluated and, if necessary, Section 7 consultation reinitiated. 3. Water production would be managed to ensure maintenance or enhancement of riparian habitat. 4. Where technically and economically feasible, use directional drilling or multiple wells from the same pad to reduce surface disturbance and eliminate drilling in suitable riparian habitat. Ensure that such directional drilling does not intercept or degrade alluvial aquifers. 5. Activities would maintain a 300 feet buffer from suitable riparian habitat year long. 6. Activities within 0.25 mile of occupied breeding habitat would not occur during the breeding season of April 15 to August 15. 7. Ensure that water extraction or disposal practices do not result in change of hydrologic regime that would result in loss or degradation of riparian habitat. 8. Re-vegetate with native species all areas of surface disturbance within riparian areas and/or adjacent land. 9. Avoid loss or disturbance of riparian habitats. <p>Additional measures to avoid or minimize effects to the species may be developed and implemented in consultation with the USFWS between the lease sale stage and lease development stage to ensure continued compliance with the ESA.</p>
Yellow-billed Cuckoo	Yellow-billed Cuckoo Habitat (riparian areas) (12,155 acres)	X	X	X	X	<p>The lessee/operator is given notice that the lands in or adjacent to this parcel contain potentially suitable habitat that falls within the range for western yellow-billed cuckoo, a federally listed species. Avoidance or use restrictions may be placed on portions of the lease. Application of appropriate measures will depend whether the action is temporary or permanent, and whether it occurs within or outside the breeding and nesting season. A <u>temporary</u> action is completed prior to the following breeding season, leaving no permanent structures and resulting in no permanent habitat loss. A <u>permanent</u> action could continue for more than one breeding season and/or cause a loss of habitat or displace western yellow-billed cuckoos through disturbances (e.g., generation of noise between June 15 and August 31). The following avoidance and minimization measures have been designed to ensure activities carried out on the lease are in compliance with the Endangered Species Act. Integration of and adherence to these measures will facilitate review and analysis of any submitted permits under the authority of this lease. Following these measures could reduce the scope of Endangered Species Act, Section 7</p>

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
						<p>consultation at the permit stage. Avoidance and minimization measures include the following:</p> <ol style="list-style-type: none"> 1. Habitat suitability within and/or directly adjacent to the parcel will be identified prior to lease development to identify potential survey needs. 2. Protocol Breeding Season Surveys will be required in suitable habitats prior to operations unless species occupancy and distribution information is complete and available. All Surveys must be conducted by permitted individual(s), and be conducted according to protocol. 3. Temporary or permanent actions will require monitoring throughout the duration of the project to ensure that western yellow-billed cuckoo or its habitat is not affected in a manner or to an extent not previously considered. Avoidance and minimization measures will be evaluated throughout the duration of the project. 4. Water production will be managed to ensure maintenance or enhancement of riparian habitat. 5. Where technically and economically feasible, use directional drilling or multiple wells from the same pad to reduce surface disturbance and eliminate drilling in suitable riparian habitat. Ensure that such directional drilling does not intercept or degrade alluvial aquifers. 6. New roads, pipelines, or powerlines will be sited outside a 300 foot buffer of suitable habitat. 7. Drilling and pumping pads will be sited outside a 300 foot buffer from suitable habitat. Measures such as the use of hospital-grade mufflers and electric pumps or other suitable measures will be used to ensure noise levels at the edge of suitable habitat do not exceed baseline conditions. 8. Drilling activities within 0.25 miles of occupied habitat will not occur during the breeding season, which is from June 15 to August 31. 9. Ensure that water extraction or disposal practices do not result in a change of hydrologic regime that would result in loss or degradation of riparian habitat. 10. Re-vegetate all areas of surface disturbance with native species within riparian areas and/or adjacent uplands. <p>Additional measures to avoid or minimize effects to the species may be developed and implemented in consultation with the U.S. Fish and Wildlife Service between the lease sale stage and lease development stage to ensure continued compliance with the ESA.</p>
Bald Eagles	Nest Sites and Winter Roost Areas within Habitat for Bald Eagles	X	X	X	X	<p>The lessee/operator is given notice that the parcel contains habitat for the bald eagle. To protect bald eagle habitat and avoid negative impacts to the species, actions would be avoided or restricted that may cause stress and disturbance during nesting and rearing of their young. Appropriate measures would depend on whether the action is temporary or permanent, and whether it occurs within or outside the bald eagle breeding or roosting</p>

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
	Planning Area					<p>season. A temporary action is completed prior to the following breeding or roosting season, leaving no permanent structures and resulting in no permanent habitat loss. A permanent action continues for more than one breeding or roosting season and/or causes a loss of eagle habitat, or displaces eagles through disturbances, i.e., creation of a permanent structure. Current avoidance and minimization measures include the following:</p> <ol style="list-style-type: none"> 1. Surveys would be required prior to operations, unless species occupancy and distribution information is complete and available. All surveys must be conducted by qualified individual(s), and be conducted according to protocol. 2. Lease activities would require monitoring throughout the duration of the project. 3. To ensure desired results are being achieved, minimization measures would be evaluated. 4. Water production would be managed to ensure maintenance or enhancement of riparian habitat. 5. Temporary activities within 1.0 mile of nest sites would not occur during the breeding season, which lasts from January 1 to August 31, unless the area has been surveyed according to protocol and determined to be unoccupied. 6. Temporary activities within 0.5 miles of winter roost areas, (e.g., cottonwood galleries) would not occur during the winter roost season of November 1 to March 31, unless the area has been surveyed according to protocol and determined to be unoccupied. 7. No permanent infrastructure would be placed within 1.0 mile of nest sites. 8. No permanent infrastructure would be placed within 0.5 miles of winter roost areas. 9. Remove big game carrion to 100 feet from on lease roadways occurring within bald eagle foraging range. 10. Avoid loss or disturbance to large cottonwood gallery riparian habitats. 11. Where technically and economically feasible, use directional drilling or multiple wells from the same pad to reduce surface disturbance and eliminate drilling in suitable habitat. Utilize directional drilling to avoid direct impacts to large cottonwood gallery riparian habitats. Ensure that such direction drilling does not intercept or degrade alluvial aquifers. 12. All areas of surface disturbance within riparian areas and/or adjacent uplands should be re-vegetated with native species. <p>Additional measures may also be employed to avoid or minimize effects to the species between the lease stage and lease development stage.</p>

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
Golden Eagle	Golden Eagle Nest Sites and Territories Planning Area	X	X	X	X	<p>The lessee/operator is given notice that the parcel contains habitat for the golden eagle. In order to protect the golden eagle habitat, nest sites, and nesting territories, actions would be avoided or restricted that may cause stress and disturbance during nesting and rearing of their young. Appropriate measures would depend on whether the action is temporary or permanent and whether it occurs within or outside the golden eagle breeding season. A temporary action is completed prior to the following breeding or roosting season, leaving no permanent structures and resulting in no permanent habitat loss. A permanent action continues for more than one breeding or roosting season and/or causes a loss of eagle habitat or displaces eagles through disturbances (i.e., creation of a permanent structure). Current avoidance and minimization measures include the following:</p> <ol style="list-style-type: none"> 1. Surveys would be required prior to operations unless species occupancy and distribution information is complete and available. All surveys must be conducted by qualified individual(s), and be conducted according to protocol. 2. Lease activities would require monitoring throughout the duration of the project. 3. To ensure desired results are being achieved, minimization measures would be evaluated. 4. Temporary activities within 0.5 miles of nest sites would not occur during the breeding season from January 1 to August 31, unless the area has been surveyed according to protocol and determined to be unoccupied. 5. No permanent infrastructure would be placed within 0.5 miles of nest sites. 6. Remove big game carrion to 100 feet from on-lease roadways occurring within golden eagle foraging range. 7. Where technically and economically feasible, use directional drilling or multiple wells from the same pad to reduce surface disturbance and eliminate drilling in suitable habitat. Utilize directional drilling to avoid direct impacts to large cottonwood gallery riparian habitats. Ensure that such direction drilling does not intercept or degrade alluvial aquifers. <p>Additional measures may also be employed to avoid or minimize effects to the species between the lease stage and lease development stage.</p>
Raptors	Raptors Planning Area	X	X	X	X	<p>The lessee/operator is given notice that appropriate seasonal and spatial buffers shall be placed on all known raptor nests in accordance with Utah Field Office Guidelines for Raptor Protection from Human and Land use Disturbances (USFWS 2002) and BMPs for Raptors and their Associated Habitats in Utah (BLM 2006). All construction-related activities will not occur within these buffers if pre-construction monitoring indicates the nests are active, unless a site specific evaluation(survey) for active nests is completed prior to construction and if a BLM wildlife biologist, in consultation with USFWS and UDWR, recommends that activities may be permitted within the buffer. The BLM will coordinate with the USFWS and UDWR and have a recommendation within 3 to 5 days of notification. Any construction activities authorized within a protective (spatial and</p>

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
						seasonal) buffer for raptors will require an onsite monitor. Any indication that activities are adversely affecting the raptor and/or its young the on-site monitor will suspend activities and contact the BLM Authorized Officer immediately. Construction may occur within the buffers of inactive nests. Construction activities may commence once monitoring of the active nest site determines that fledglings have left the nest and are no longer dependent on the nest site. Modifications to the Surface Use Plan of Operations may be required in accordance with Section 6 of the lease terms and 43CFR3101.1-2.
Migratory Birds	Migratory Bird Habitat Planning Area	X	X	X	X	The lessee/operator is given notice that surveys for nesting migratory birds may be required during migratory bird breeding season (May 1 to July 30) whenever surface disturbances and/or occupancy is proposed in association with mineral exploration and development within priority habitats. Surveys should focus on identified priority bird species in Utah. Field surveys will be conducted as determined by the authorized officer of the BLM. Based on the result of the field survey, the Authorized Officer will determine appropriate buffers and timing limitations.
Ferruginous Hawk and Burrowing Owl	Ferruginous Hawk and Burrowing Owl Habitat Planning Area	X	X	X	X	The lessee/operator is given notice that no surface disturbances would be conducted during the breeding and nesting season (March 1 to August 31 for burrowing owl and March 1 to August 1 for ferruginous hawk) within spatial buffers (0.25 mile for burrowing owl and 0.5 mile for ferruginous hawk) of known nesting sites.
White-tailed Prairie Dog Gunnison Prairie Dog	White-tailed Prairie Dog Habitat Gunnison Prairie Dog Habitat (6,825 acres)	X	X	X	X	The lessee/operator is given notice that no surface-disturbing activities within 660 feet (200 meters) of active prairie dog colonies identified within prairie dog habitat would be allowed. No permanent aboveground facilities are allowed within the 660-foot buffer.
Special Status Species: Kit Fox	Kit Fox Habitat Planning Area	X	X	X	X	The lessee/operator is given notice that no surface disturbances would be allowed within 660 feet (200 meters) of an occupied natal kit fox den.
Special Status Species: California Condor	California Condor Potential Habitat Planning Area	X	X	X	X	The lessee/operator is given notice that the lands located in this parcel contain potential habitat for the California condor. Avoidance or use restrictions may be placed on portions on areas known or suspected to be used by condors. Application of appropriate measures would depend on whether the action is temporary or permanent, and whether it occurs within or outside potential habitat. A temporary action is completed prior to the following important season of use, leaving for habitat functionality. A permanent action continues for more than one season of habitat use, and/or causes a loss of condor habitat function or displaces condors through continued disturbance (i.e., creation of a permanent structure requiring repetitious maintenance or emits disruptive levels of noise). Current avoidance and minimization measures include the following:

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
						<ol style="list-style-type: none"> 1. Surveys would be required prior to operations, unless species occupancy and distribution information is complete and available. All Surveys must be conducted by qualified individual(s) approved by the BLM and must be conducted according to approved protocol. 2. If surveys result in positive identification of condor use, all lease activities would require monitoring throughout the duration of the project to ensure desired results of applied mitigation and protection. Minimization measures would be evaluated during development and, if necessary, Section 7 consultation may be reinitiated. 3. Temporary activities within 1.0 mile of nest sites would not occur during the breeding season. 4. Temporary activities within 0.5 miles of established roosting sites or areas would not occur during the season of use, which is from August 1 to November 30, unless the area has been surveyed according to protocol and determined to be unoccupied. 5. No permanent infrastructure would be placed within 1.0 mile of nest sites. 6. No permanent infrastructure would be placed within 0.5 miles of established roosting sites or areas. 7. Remove big game carrion to 100 feet from on lease roadways occurring within foraging range. 8. Where technically and economically feasible, use directional drilling or multiple wells from the same pad to reduce surface disturbance and eliminate drilling in suitable habitat. Utilize directional drilling to avoid direct impacts to large cottonwood gallery riparian habitats. Ensure that such directional drilling does not intercept or degrade alluvial aquifers. 9. Re-initiation of Section 7 consultation with the USFWS would be sought immediately if mortality or disturbance to California condors is anticipated as a result of project activities. Additional site-specific measures may also be employed to avoid or minimize effects to the species. These additional measures would be developed and implemented in consultation with the USFWS to ensure continued compliance with the ESA. <p>Additional measures may also be employed to avoid or minimize effects to the species between the lease sale and lease development stages. These additional measures would be developed and implemented in consultation with the USFWS to ensure continued compliance with the ESA.</p>
Jones cycladenia	Potential, suitable, and occupied habitat	X	X	X	X	<p>The lessee/operator is given notice that the lands located in this parcel contain potential habitat for Jones cycladenia.</p> <p>In order to minimize effects to the federally threatened Jones cycladenia, the BLM, in coordination with the USFWS has developed the following avoidance and minimization</p>

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
						<p>measures. Implementation of these measures will help ensure the activities carried out during oil and gas development (including but not limited to drilling, production, and maintenance operations) are in compliance with the ESA. For the purposes of this document, the following terms are so defined: <i>potential habitat</i> is defined as areas that satisfy the broad criteria of the species habitat description, usually determined by preliminary, in-house assessment. <i>Suitable habitat</i> is defined as areas that contain or exhibit the specific components or constituents necessary for plant persistence determined by field inspection and/or surveys; it may or may not contain Jones cycladenia; habitat descriptions can be found in Federal Register Notice and species recovery plan links at <http://www.fws.gov/endangered/wildlife.html>. <i>Occupied habitat</i> is defined as areas currently or historically known to support Jones cycladenia; synonymous with “known habitat.” The following avoidance and minimization measures should be included in the Plan of Development:</p> <ol style="list-style-type: none"> 1. Pre-project habitat assessments will be completed across 100 percent of the project disturbance area within potential habitat¹ prior to any ground disturbing activities (including ATV use) to determine if suitable Jones cycladenia habitat is present. 2. Site inventories will be conducted within suitable habitat to determine occupancy. Where standard surveys are technically infeasible and otherwise hazardous, due to topography, slope, etc., suitable habitat will be assessed and mapped for avoidance (hereafter, “avoidance areas”); in such cases, in general, 300 foot buffers will be maintained between surface disturbance and avoidance areas. However, site specific distances will need to be approved by USFWS and BLM when disturbance will occur upslope of habitat. Where conditions allow, inventories: <ol style="list-style-type: none"> a. Must be conducted by qualified individuals(s) and according to BLM and Service accepted survey protocols. b. Will be conducted in suitable and occupied habitat for all areas proposed for surface disturbance prior to initiation of project activities and within the same growing season at a time when the plant can be detected (usually April 15 to June 5; however, surveyors should verify that the plant is flowering by contacting a BLM or USFWS botanist or demonstrating that the nearest known population is in flower), c. Will occur within 300 feet from the centerline of the proposed right-of-way (ROW) for surface pipelines or roads; and within 300 feet from the perimeter of disturbance for the proposed well pad, including the well pad, d. Will include, but not be limited to, plant species lists and habitat characteristics. e. Will be valid until April 15 of the following year. 3. Design project infrastructure to minimize impacts within suitable habitat:

Resource of Concern	Applicable Area	Alternative				Lease Notice Description
		A	B	C	D	
						<ul style="list-style-type: none"> a. Where standard surveys are technically infeasible, infrastructure and activities will avoid all suitable habitat (avoidance areas) and incorporate 300 foot buffers, in general; however, site-specific distances will need to be approved by USFWS and BLM when disturbance will occur upslope of habitat. b. Reduce well pad size to the minimum needed without compromising safety. c. Where technically and economically feasible, use directional drilling or multiple wells from the same pad. d. Limit new access routes created by the project. e. Roads and utilities should share common ROWs where possible. f. Reduce the width of ROWs and minimize the depth of excavation needed for the road bed; where feasible, use the natural ground surface for the road within habitat. g. Place signing to limit off-road travel in sensitive areas. h. Stay on designated routes and other cleared/approved areas. i. All disturbed areas will be re-vegetated with native species comprised of species indigenous to the area and non-native species that are not likely to invade other areas. <p>4. Within occupied habitat, project infrastructure will be designed to avoid direct disturbance and minimize indirect impacts to populations and to individual plants:</p> <ul style="list-style-type: none"> a. Follow the above recommendations in Section 3 for project design within suitable habitats. b. To avoid water flow and/or sedimentation into occupied habitat and avoidance areas, silt fences, hay bales, and similar structures or practices will be incorporated into the project design; appropriate placement of fill is encouraged. c. Construction of roads will occur such that the edge of the ROW is at least 300 feet from any plant and 300 feet from avoidance areas, d. Roads will be graveled with occupied habitat; the operator is encouraged to apply water for dust abatement to such areas from April 15 to June 5 (flowering period); dust abatement applications will be comprised of water only. e. The edge of the well pad should be located at least 300 feet away from plants and avoidance areas, in general; however, site specific distances will need to be approved by USFWS and BLM when disturbance will occur upslope of habitat, f. Surface pipelines will be laid such that a 300 foot buffer exists between the edge of the ROW and plants and 300 feet between the edge of ROW and avoidance areas; use stabilizing and anchoring techniques when the pipeline crossed suitable habitat to ensure pipelines don't move towards the population; site specific distances will need to be approved by USFWS and BLM when disturbance will occur upslope of habitat. g. Construction activities will not occur from April 15 through June 5 within

						<p>occupied habitat.</p> <p>h. Before and during construction, areas for avoidance should be visually identifiable in the field, e.g., flagging temporary fencing, rebar, etc.,</p> <p>i. Place produced oil, water, or condensate tanks in centralized locations, away from occupied habitat., and</p> <p>j. Minimize the disturbed area of producing well locations through interim and final reclamation. Reclaim well pads following drilling to the smallest area possible.</p> <p>5. Occupied Jones cycladenia habitats within 300 feet of the edge of the surface pipelines' ROWs, 300 feet of the edge of the roads' ROWs, and 300 feet from the edge of the well pad shall be monitored for a period of three years after ground disturbing activities. Monitoring will include annual plant surveys to determine plant and habitat impacts relative to project facilities. Annual reports shall be provided to the BLM and the USFWS. To ensure desired results are being achieved, minimization measures will be evaluated and may be changed after a thorough review of the monitoring results and annual reports during annual meetings between the BLM and the USFWS.</p> <p>6. Re-initiation of Section 7 consultation with the USFWS will be sought immediately if any loss of plants or occupied habitat for the Jones cycladenia is anticipated as a result of project activities.</p> <p>Additional site-specific measures may also be employed to avoid or minimize effects to the species. These additional measures will be developed and implemented in consultation with the USFWS to ensure continued compliance with the ESA.</p>
